

# Rounding Numbers To Nearest Hundreds - 1

## Rounding Numbers

To round a given number to nearest hundred, underline the tens digit.

1. If this tens digit is one of 1, 2, 3, 4; we round the given number down by keeping the hundreds digit and changing tens digit and ones digit to zero.
2. If the tens digit is one of 5, 6, 7, 8 or 9; we round the given number up by adding one to hundreds digit and changing tens and ones digits to zero.

**For example;** round 475 to nearest hundred. To round this number to nearest hundred, underline the tens digit as 475. Now tens digit is 7 (one of 5 to 9 set), hence we will round 475 up by adding 1 to hundreds digit 4 and changing tens and ones digits, 7 and 5 respectively to zero. Hence 475 is rounded up to 500.

Now round the following numbers to nearest hundreds. First two are done as examples.

1. 593 = 5 <u>9</u> 3 = 600	2. 437 = 4 <u>3</u> 7 = 400
3. 267	4. 780
5. 148	6. 946
7. 500	8. 698
9. 2,357	10. 5,872
11. 68	12. 287
13. 3,817	14. 9,156
15. 4,444	16. 8,678
17. 684	18. 556
19. 2,225	20. 2,883
