

## Rounding Numbers To Nearest Hundreds - 2

### Rounding Numbers

To round a given number to nearest hundred, underline the tens digit.

1. If this tens digit is one of 1, 2, 3, 4; we round the given number down by keeping the hundreds digit and changing tens digit and ones digit to zero.
2. If the tens digit is one of 5, 6, 7, 8 or 9; we round the given number up by adding one to hundreds digit and changing tens and ones digits to zero.

**For example;** round 5,739 to nearest hundred. To round this number to nearest hundred, underline the tens digit as 5,739. Now tens digit is 3 (from 1 to 4 set), hence we will round 5, 739 down by keeping the hundreds digit 7 same and changing tens and ones digits, 3 and 9 respectively to zero. Hence 5,739 rounded down to 5,700.

Now round the following numbers to nearest hundreds. First two are done as examples.

1. 235 = <u>23</u> 5 = 200	2. 488 = 4 <u>8</u> 8 = 500
3. 602	4. 228
5. 994	6. 338
7. 883	8. 520
9. 7,445	10. 3,367
11. 257	12. 4,616
13. 2,445	14. 592
15. 111	16. 4,735
17. 196	18. 829
19. 292	20. 350
